SUMMARY

Backend and Full-Stack Software Developer with 3+ years of experience designing, maintaining, and improving production-grade web applications. Strong focus on backend systems, RESTful API development, PostgreSQL database design, and debugging live systems. Proven ability to work in small, fast-moving teams to deliver reliable, scalable software solutions. Experienced in Python, JavaScript, C#, and SQL, with hands-on exposure to healthcare and administrative platforms. Detail-oriented, self-driven, and comfortable owning features end-to-end from database to API to frontend integration.

EXPERIENCE

Software Developer

Jan. 2022 – Dec 2025

University of Johannesburg

Johannesburg, SA

- Designed, maintained, and extended backend systems supporting live university platforms used by staff and students.
- Developed and consumed RESTful APIs using Python (Flask, Django) and C# (ASP.NET), integrating them with React-based frontends.
- Designed and optimised relational databases using PostgreSQL and MS SQL Server, improving query performance and data integrity.
- Debugged and resolved production issues, ensuring system stability, data consistency, and minimal downtime.
- Worked closely with stakeholders to translate operational requirements into reliable technical solutions.
- Implemented authentication, role-based access control, and secure data handling for internal platforms.

Undergraduate Tutor & Student Assistant

Feb. 2021 – Nov. 2021

University of Johannesburg

Johannesburg, SA

- Provided technical support and code reviews for Python, JavaScript, C#, and SQL-based applications.
- Assisted students in debugging, improving database queries, and structuring backend logic.
- Strengthened ability to explain complex technical concepts clearly and concisely.

EDUCATION

University of Johannesburg

Johannesburg, South Africa

Master of Applied Data Science

Feb. 2024 – Nov. 2025

University of Johannesburg

Johannesburg, South Africa

Bachelor of Commerce Honours in Information Systems

Feb. 2023 – Nov. 2023

University of Johannesburg

Johannesburg, South Africa

Advanced Diploma in Business Information Technology

Feb. 2022 – Nov. 2022

University of Johannesburg

Johannesburg, South Africa

Diploma in Business Information Technology

Feb. 2019 – Nov. 2021

PROJECTS

Special Appointment Management System | Python, Flask, PostgreSQL, React, ASP.NET

- Built a full-stack appointment management platform with a strong backend focus on data integrity and API reliability.
- Designed RESTful APIs to manage appointments, users, and approval workflows.
- Implemented PostgreSQL schemas and queries to support transactional consistency.
- Generated system documents and confirmations programmatically using Python.

Dnko – Booking Platform | *Node.js, Express, MongoDB, React*

- Developed backend services for appointment scheduling, notifications, and admin management.
- Handled API integration, authentication, and data validation across the platform.
- Deployed and maintained the application in a production environment.

HOPFAN Library Management System | *Next.js, Prisma, SQLite, NextAuth*

- Built a full-stack library system with secure authentication, lending workflows, and automated fine calculations.
- Designed backend APIs and database schema using Prisma ORM.
- Integrated email and SMS notifications for loan reminders and overdue alerts.

CoachWell – Management System | *Next.js, Node.js, Express, MongoDB*

- Built backend APIs to manage clients, sessions, and financial records.
- Implemented secure authentication and role-based access control.
- Designed dashboards consuming backend APIs for operational insights.

Event Registration & Attendance System | *Python, Flask, PostgreSQL, React*

- Developed backend services for real-time attendance tracking using QR codes.
- Designed PostgreSQL schemas and optimised queries for event analytics.

TECHNICAL SKILLS

Backend & APIs: Python (Flask, Django), Node.js (Express), C# (ASP.NET), RESTful API Design

Databases: PostgreSQL, MS SQL Server, MongoDB, Database Design, Query Optimisation

Frontend: React, Next.js, Angular, HTML/CSS

Tools: Git, Docker, Postman, VS Code, Visual Studio

Cloud & Deployment: Vercel, Netlify, Heroku, CI/CD Pipelines

Other: Authentication (JWT), Role-Based Access Control, Debugging Production Systems, Agile/Scrum

LANGUAGES

English | French | Swahili
